

B.18. Back up Rescue Plan in Maritime Area

RESCUE OF PERSONS IN DISTRESS		BACKUP PLAN IN MARITIME AREA		
MEASURES RESERVED TO THE RESPONSIBLE OPS and EMT AT THE ADA BASE				
Actions to take (in chronological order)		Task completed Y / N	Time of Completion	See:
A	If possible, prime another ADA aircraft to begin the rescue mission. Aircraft configuration and list of equipment to be put on board.			
B	As soon as the desired aircraft is located, follow the following instructions : <ul style="list-style-type: none"> • Transmit the precise position of the accident site to all the actors involved in the search procedure. • Guide the means of rescue (aircraft equipped with a winch or canoe). • Stay in the area until the victims have been rescued, or other means of recovery have been put in place (aircraft equipped with a winch or canoe) or until the search aircraft has reached its endurance limit. • Depending on the distance from the coast, ask the boats which could rescue the wrecked, to transport them to the nearest platform. 			Liaison Document
C	Warning: Breathing the rotor which could lift objects and cause injury to personnel, or even overturn a lifeboat. The transmission on 121.5 MHz could experience interference in the immediate vicinity of the receiver because of the noise of the helicopter as well as by the phenomenon of the cone of silence. Therefore, before making a transmission, you must move away (without losing sight of the aircraft).			
D	When the aircraft rescue procedure is completed, carry on the initial emergency procedure.			Return to the previous procedure.
